Subject: Creation of new Charge bands & ensuring proper depth of analysis in Local exchange

In the post MNP scenario, it has been reported by some of the circles that the inter circle mobile calls from landline network are maturing without "0" and the billing centre is charging them as local call resulting into revenue loss. This is due to the reason that exchange in charges in some of the local exchanges have not carried out at least "4" digit analysis in the local exchanges.

In order to analyze/bar these type of calls in the local exchanges itself, please refer to this office vide letter no. 24-15/2008-PHM (IN)-MNP dated 23rd July '10 wherein instruction were issued regarding creation of charge bands for handling billing for fixed to mobile calls post implementation of MNP and maintain proper length of analysis of at least "4" digit at local exchange for routing for intra circle mobile calls.

Implementation of the above instructions will help proper billing in the CDR system by :

1. Identifying a call as On-net or Off-net based on the charge band information received from exchange and bill the calls accordingly.
2. Filtering /dropping the inter-circle mobile calls dialed by subscribers without "0" at local exchange itself which otherwise shall be wrongly identified as local call and billed wrongly.

In view of the above it is once again reiterated that exchange in charges must ensure that the

The SSA heads must ensure that the local exchange in charges comply the implementation of four digit analysis of all the intra circle mobile calls from Landline network by 7th October 2011 and in turn the circle should comply the same by 14th October 2011 to this office . Any non-compliance resulting into the revenue loss would be the responsibility of the concerned field units .
